Cannon Allen

Investment Advisor
cannon@jacksonsquarecap.com

Cannon focuses on risk management and portfolio hedging. Cannon brings experience at Merrill Lynch and JP Morgan Securities.

What to expect

Our growth portfolios are currently primarily invested in US large and mid-cap names that show growth potential.

STYLE: Value Blend **Growth**

Who we are

Jackson Square Capital is a Registered Investment Advisory Firm that partners with high net worth individuals to help safeguard and grow their wealth. At our core, we are rational, practical advisors whose every action is driven by our clients' best interests.

Growth Philosophy

Jackson Square Capital's multi-asset growth portfolios are carefully tailored to each investor's entry point, risk tolerance, and cash-flow needs. Once we understand a client's goals, we build a custom strategy based on five guiding principles

Due Diligence: We evaluate companies from multiple vantage points, combining sell-side research, main street perspective and in-house analysis. We believe the best investment opportunities are companies with a strong track record of beat-and-raise results and best-in-class products.

Asset class is just the beginning: We believe there is a time and a place for everything. Our daily analysis helps us stay current and anticipate market moves by closely tracking the interconnectivity of markets. The choice to deliver a 'go anywhere' strategy affords us the flexibility to overweight certain asset classes or sectors based on changing market conditions.

Thoughtful deployment of capital: Cash is put to work patiently and practically, investing in companies offering attractive risk-reward opportunities at the prevailing market price. When securities are transferred in-kind, buy/sell/hold decisions are made at the individual level—even if that means some positions are unique to clients.

Capital Protection: Each position is managed to its unique entry point, allowing us to maintain per-position loss limits for each holding in each account. This results in tax-efficient returns, and helps us prevent emotion from overriding fundamental data points.

Cost Conscious: Aside from poor management, three factors degrade real returns: inflation, fees, taxes. The way we control for the three factors is 1) limit 'cash drag' when possible; 2) preference for pure, low-cost investments; and 3) aim for a net-zero tax bill at the end of each year.

Performance

Performance from 5.1.19 through 7.31.20.

78 JSC Growth Accounts as compared to the Russell 1000 Index and to our Blended Benchmark, which is 20 percent Bloomberg Barclays US Aggregate Index, 60 percent Russell 1000 and 20 percent MSCI EAFE.

Average Annual Total Returns (%)

Treasury Bond	0.06

Case Study:

Why we added to VRNS this quarter

Varonis develops software that enables enterprise customers to identify and secure sensitive files held outside the cloud environment. The company is buoyed by the 'work-from-anywhere' trend and the rise in cloud computing. We see these drivers continuing to benefit VRNS for some time, and the company also stands to profit from public awareness and demand for data security. In addition, the company's recent conversion to subscription-based billing has been a historical driver of business results in other enterprise software companies.

Varonis Systems, Inc. (VRNS)

Disclosures

This material is intended for informational purposes only. It should not be construed as legal or tax advice and is not intended to replace the advice of a qualified attorney or tax advisor. The information contained in this presentation has been compiled from third party sources and is believed to be reliable. All opinions and views constitute our judgments as of the date of writing, and are subject to change at any time without notice. This presentation is not an offer or solicitation to buy or sell securities and may not be construed as investment advice and does not give investment recommendations. The performance data quoted represents past performance and does not guarantee future results. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client or prospective client's investment portfolio. Historical performance results for investment indices and/or categories generally do not reflect the deduction of transaction and/or custodial charges, the deductions of an investment management fee, nor the impact of taxes, the incurrence of which would have the effect of decreasing historical performance results. The investment return and principal value of an investment will fluctuate; thus an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than return data quoted herein. An investor may experience loss of principal. Investment decisions always should be made based on the investor's specific financial needs and objectives, goals, time horizon, and risk tolerance. The asset classes and/or investment strategies described may not be suitable for all investors, and investors should consult with an investment advisor to determine the appropriate investment strategy.

Investments in smaller companies carry greater risk than is customarily associated with larger companies for various reasons, such as volatility of earnings and prospects, higher failure rates, and limited markets, product lines, or financial resources. Investing overseas involves special risks, including the volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. Income (bond) securities are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Exchange Traded Funds (ETFs) are subject to risks similar to those of stocks, such as market risk. Investing in ETFs may bear indirect fees and expenses charged by ETFs in addition to their direct fees and expenses, as well as indirectly bearing the principal risks of those ETFs. ETFs may trade at a discount to their net asset value, and are subject to the market fluctuations of their underlying investments. Investing in commodities can be volatile, can suffer from periods of prolonged decline in value, and may not be suitable for all investors. Index performance is presented for illustrative purposes only, and does not represent the performance of any specific investment product or portfolio. An investment cannot be made directly into an index.

Jackson Square Capital, LLC's composite performance results reflect time-weighted rates of returns of a composite of actual portfolios which have traded equities based upon the Firm's proprietary trading strategies. Whenever possible, we attempt to use accounts with no additions or withdrawals. Accounts are excluded from the composite according to our Account Exclusion Policy. Results from these excluded accounts may differ substantially from the composite. In some cases, we rely on only 78 actual accounts for the calculation of the composite return which are accounts we believe to be historically representative of the portfolio strategy during the corresponding time period. Performance results reflect the deduction of management fees and transaction fees.

Investment advisory services provided through Jackson Square Capital, LLC an SEC registered investment adviser.
