

JSC Active Management - Growth Strategy

Q3 '25 | As of 9.30.25

CHARACTERISTICS

Objective: JSC's Actively Managed Growth Portfolios are carefully tailored to each individual investor, for the purpose of capital appreciation. Growth Portfolios are designed to provide low beta, low downside capture, and consistent outperformance (defined as out performance over any 12 month period).

Methodology: A multi-asset strategy is deployed based on a framework developed by Andrew Graham, CFA over a 30 year timespan.

- **Investment selection** is done on a macro and micro level. Market internals, technical indicators, and broad economic conditions are utilized to identify key themes. Individual securities are then selected based on risk/reward and a combination of sell-side research and Main Street perspective.
- **Timing** is critical. Fundamentally attractive securities are bought at technically oversold levels when constructing a new portfolio, meaning all investments are not uniformly held across Growth Portfolios. Sell decisions are also made at the individual level, contributing to tax-efficient returns.
- **Protection** is as important as growth. Per-position loss limits are a key component of JSC's pragmatic approach to active management. Fees and taxes are limited in order to control two factors that degrade real returns.

Benchmark: 60% Russell 1000 Index, 20% Bloomberg Barclays US Aggregate Index, 20% MSCI EAFE (Net) Index

Case Study: Cadence Design Systems Inc. (CDNS)

Cadence Design Systems Inc. (CDNS)

April 1, 2025 - September 30, 2025

Cadence Design Systems Inc. (CDNS) chart courtesy of FactSet.

Cadence is a beneficiary of nearly every major chip announcement, providing the design software behind new custom ASIC chips that are essential to AI datacenter buildout. Increased demand for Cadence's advanced designs are driven by the expansion of AI into inference, video and agentic applications.

Aside from AI demand, CDNS has a growing set of customers who are seeking out custom chip designs including auto, industrial, and robotics. The company also benefits from its positioning in R&D budgets, which tend to be among the last areas companies cut spending.

On top of the \$15M revenue beat in 2Q, Cadence raised its CY25 rev guidance by \$50M (mid-point of the range) from \$5.19B to \$5.24B (up 13% Y/Y versus prior guidance up 12%) and EPS from \$6.78 to \$6.90.

DISCLOSURES

This material is intended for informational purposes only. It should not be construed as legal or tax advice and is not intended to replace the advice of a qualified attorney or tax advisor. The information contained in this presentation has been compiled from third party sources and is believed to be reliable. All opinions and views constitute our judgments as of the date of writing, and are subject to change at any time without notice. This presentation is not an offer or solicitation to buy or sell securities and may not be construed as investment advice and does not give investment recommendations. The performance data quoted represents past performance and does not guarantee future results. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client or prospective client's investment portfolio. Historical performance results for investment indices and/or categories generally do not reflect the deduction of transaction and/or custodial charges, the deductions of an investment management fee, nor the impact of taxes, the incurrence of which would have the effect of decreasing historical performance results. The investment return and principal value of an investment will fluctuate; thus an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than return data quoted herein. An investor may experience loss of principal. Investment decisions always should be made based on the investor's specific financial needs and objectives, goals, time horizon, and risk tolerance. The asset classes and/or investment strategies described may not be suitable for all investors, and investors should consult with an investment advisor to determine the appropriate investment strategy.

Investments in smaller companies carry greater risk than is customarily associated with larger companies for various reasons, such as volatility of earnings and prospects, higher failure rates, and limited markets, product lines, or financial resources. Investing overseas involves special risks, including the volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. Income (bond) securities are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Exchange Traded Funds (ETFs) are subject to risks similar to those of stocks, such as market risk. Investing in ETFs may bear indirect fees and expenses charged by ETFs in addition to their direct fees and expenses, as well as indirectly bearing the principal risks of those ETFs. ETFs may trade at a discount to their net asset value, and are subject to the market fluctuations of their underlying investments. Investing in commodities can be volatile, can suffer from periods of prolonged decline in value, and may not be suitable for all investors. Index performance is presented for illustrative purposes only, and does not represent the performance of any specific investment product or portfolio. An investment cannot be made directly into an index.

Jackson Square Capital, LLC's composite performance results reflect time-weighted rates of returns of a composite of actual portfolios which have traded equities, ETFs, bonds, and other securities based upon the Firm's proprietary trading strategies. Whenever possible, we attempt to use accounts with no additions or withdrawals. Accounts are excluded from the composite according to our Account Exclusion Policy. Results from these excluded accounts may differ substantially from the composite. Included accounts for the calculation of the composite return are accounts we believe to be historically representative of the portfolio strategy during the corresponding time period with a minimum account size of \$100,000. Performance results reflect the deduction of transaction fees and a model management fee of 1.00%. The Russell 1000 is presented in the average annual total returns and strategy metrics tables as an additional benchmark for comparison purposes.
